SDBIC *SECUREPLUS* VAULT FACILITIES

SecurePlus accreditation was developed in response to the lack of recognized standards to assess the safety of privately operated vaults. To become accredited, a facility undergoes a rigorous on-site assessment of its physical design and operations, involving analysis and inquiries in over 200 different areas ranging from vault design and construction, physical and electronic security, access and technology controls, fire detection and suppression, institutional policies and procedures, and management oversight. These are some of the most secure facilities available to the public. They provide better accessibility, and the flexibility to handle broader classes of assets with a higher level of service.

If you have another facility you would like to use, please contact us at 224-227-6181.
