# The Step-by-Step Guide: Mail-In

Important documents are often sent as email attachments (e.g. insurance documents or invoices). Since these documents are often relevant for years, it is important to have them safely stored and accessible. For this reason, we have the *Mail-In* function as an alternative to our standard file upload feature. This function enables you to send email documents from other parties directly to your safe. This

makes your Digital Fortress a central repository for important emails and their attachments. To ensure the best possible level of Spam protection, we have various measures working in the background to protect your data. One consequence of these security measures is that there may be a delay in processing your emails while the sender is verified. This process may take up to 30 minutes and will be reduced for each subsequent delivery until it takes only 30 seconds to complete this process.

### **Overview: Mail-In Features**

- Viewing emails: emails are automatically sorted by sender. To view the senders, navigate through your *Private Safe* and then select *Mail-In*. By clicking on the sender's email address you can view all the processed emails.
- Emails without attachments: for emails without attachments, a PDF document of the email text is created and stored as a file in your safe.
- Emails with attachments: for emails with attachments, the attached document(s) from the email are automatically extracted and stored by sender.

## **Activate Mail-In Function**

### Step 1: Log in and check the Mail-In tab

- 1. First log in to your Digital Fortress via any browser on your PC or Mac.
- 2. Click the Mail-In tab in the left sidebar.
- 3. Select Settings.

Your Mail-In email address will be automatically generated and displayed in the middle of the screen.

You can now use this email address to send documents (e.g. bank statements) to your safe.

## **Mail-In Tips**

fil p Email Set

Not

- To make sending emails to Mail-In easier, click on the "Copy" button to copy the email address to your clipboard.
- Save your Mail-In email address into your email address book. For example, under the name "SecureSafe Mail-In."

NOTE: To update your built-in functions use the circular arrow at the top right of your safe or the refresh button (not the browser function).

### Move Attachments to File Safe

### Step 1: Log in and check the Mail-In tab

1. Log in to your Digital Fortress and click the Mail-In tab in the left sidebar.

2. Sele		Velcome michelle.harris@sdbic.com		nt Help 📑 Logou
File Safe	Download Sort = More =			Refresh
Password Safe	Subject	Attachment	Size	Received

ings fications				

### Step 2: Move Mail-In attachments to File Safe

- 1. Select the attachment you want to move.
- 2. Click the More dropdown menu and select Cut Items or Copy Items.
  - a. **Cut Items** will move the attachment to the File Safe and remove it from Mail-In mailbox.
  - b. **Copy Items** will create a copy of the attachment in the File Safe and the original will stay in the Mail-In mailbox.
